

Environmental, Health, Safety and Energy Policy

...

Vitro's commitment is to ensure the design, manufacture, marketing, distribution of products and provision of services, in which we participate in a responsible manner, to protect employees, customers, the public and the environment, as well as to promote the efficient use of energy through:

Providing a safe place of work to prevent injury and illness.

Identifying and assessing environmental, health, safety and product stewardship (EHS) aspects, opportunities to reduce the use and consumption of energy, and their associated impacts for continual improvement.

Establishing EHS and energy performance objectives, as well as goals and actions to ensure better working conditions and contribute to climate change mitigation.

Prevent pollution through the efficient use of energy, water, and other natural resources; and identifying and implementing opportunities for conservation.

Engaging and encouraging our suppliers to report and continually improve their EHS performance in order to ensure that EHS aspects and impacts are addressed throughout the life cycle of our products.

Acquiring energy-efficient products and services; designing new projects, processes and facilities focused on energy optimization.

Complying with applicable legal requirements, internal standards, and other requirements identified by our stakeholders.

A handwritten signature in black ink, appearing to read 'Alfonso Gómez Tamez', written over a horizontal line.
